What is Ross Inu?

Ross Inu is a unique decentralized finance (DeFi) cryptocurrency that encompasses non-fungible token (NFT) collections in its ecosystem. NFTs are a unique way to store value and the Ross Inu ecosystem will offer an infrastructure to unlock that value. This will be accomplished by providing opportunities to stake NFTs to earn items used in the gamification of the NFTs. This provides a unique opportunity for NFT owners to make transactions with farmed items. Ross Inu will have a NFT marketplace that allows these transactions to happen.

Ross Inu will have a staking and yield farming platform utilizing the native token and NFTs. Staked tokens will offer in-game benefits. The future of gaming and social interaction will be in the metaverse on the blockchain. Ross Inu will offer land in the metaverse that will allow investors to stake a claim. Land will have in game benefits and also provide various ways to earn from using the land.
